

Wood Heating Grants for Wales

March 2008

Grants are available for 'automated' wood-fired equipment.

This term includes 'batchfired' **log** boilers, wood **pellet** and wood **chip** appliances, which have automated combustion control. (Automated wood chip boilers are usually relevant to larger than domestic installations or 'district heating' schemes, where the boiler output is typically greater than 30 kW.)

The Low Carbon Buildings Programme, www.lowcarbonbuildings.org.uk, covers the whole of the UK and within this scheme **grants** of up to £1,500 can be offered for boiler models and £600 for space heaters, for **domestic installations**. As **4wood llp** are registered as approved installers we can offer grant assisted installation of approved equipment as manufactured and supported by *RIKA* and *ÖKOFEN*.

Wales alone has its' own Wood Energy Business Scheme *tel. +44 (0)1970 821219*
www.woodenergybusiness.co.uk.

Phase 1 of this scheme has been completed, but Phase 2 should be announced later this year which might give the possibility of grants of up to approx 45% of total installation costs. This will probably be limited to **commercial installations**, but should cover all costs associated with the supply of heat to buildings, rather than the distribution of heat within the buildings.

4wood llp has been involved in a series of installations under Phase 1 of this scheme and we were able to offer a range of high efficiency wood burning equipment. We expect to continue this service for Phase 2.

We hope to report more information on both the above schemes as announcements are made.
