

SCANDINAVIA'S 400 YEAR OLD 'SECRET' 'WOOD FIRED STORAGE HEATING'

Ceramic, Tile & Masonry Stoves are different from metal stoves:

- Because of the much higher levels of combustion that can be achieved, fuel use can be halved, **saving you time** in loading fires and maintaining firewood stocks. Furthermore, **1 hour's firing can give 12 hours or more heat**, so time spent attending to the fire is dramatically reduced.
- They can store up to 90% of the heat they generate, making them as **efficient as high performance boilers**.
- There is hardly any smoke production, so **less flue cleaning, negligible chimney fire risk** and a **cleaner natural environment**.
- The gentle radiant heat produced causes **less circulation of dust** (particularly helpful for people with breathing problems), **less draughts** and is **safer for children** & others to approach.
- There are additional options of **cooking ovens** and **water heating boilers**, providing versatility.
- Their long life, low maintenance needs and fuel savings mean that they are investments for a future where fossil fuel costs are set to rise to uncertain levels. There are a variety of options, from self-build to quick and easy modular assembly to **suit most situations**

Please contact us again to discuss your requirements.

- By Telephone: 01559-371058 or Email: info@beaconstoves.co.uk
- Or through our website: www.beaconstoves.co.uk where more information is being posted and you can view our link to the manufacturers: www.tigchelkachels.nl
- You are also welcome to visit our showroom near Newcastle Emllyn, in Carmarthenshire between Tuesday-Saturday, 9am-5pm.

'OCCASIONAL FIRING FOR CONTINUOUS HEAT'
